INTRODUCTION	i
1 Neutrino Research	1
SNO	1
1.1 Status of the SNO Project	1
SNO NCDs	2
1.2 NCD-array pulse-shape fitting	2
1.3 NCD electronics calibrations	3
1.4 Livetime studies in the SNO NCD phase	4
1.5 Determination of the efficiency function of the NCD MUX system through raised threshold source runs	5
1.6 SNO muon chamber data acquisition verification	7
KATRIN	8
1.7 The CENPA contribution to the KATRIN neutrino mass experiment	8
1.8 The design of the KATRIN detector system	10
1.9 Electron gun for profiling silicon detectors for KATRIN	12
1.10 Developing a complete Geant4 simulation of the KATRIN detector region	13
1.11 Estimating background rates for KATRIN from cosmic rays ionizing the gaseous tritium source	14
1.12 KATRIN preamplifier design and development	15
Majorana	17
1.13 The Majorana neutrinoless double-beta decay experiment	17
1.14 DAQ and SOH for Majorana	18
1.15 The Majorana sensitivity to excited-state double-beta decays of ^{76}Ge	19
1.16 Development of simulation and analysis frameworks for Majorana	21

1.17	MaGe simulation of LANL clover detector with AmBe neutron source	22
1.18	Simulation of the SLAC electron beam dump experiment using MaGe	23
1.19	Studies of α -contamination on high purity Ge crystals	24
1.20	LArGe, liquid argon compton suppressed germanium crystal	25
1.21	Thermal modeling of the MEGA cryostat cooling	26
1.22	Monte Carlo simulation studies of the LoMo counting facility	27
2	Fundamental Symmetries and Weak Interactions	28
	Torsion Balance Experiments	28
2.1	Torsion balance search for spin coupled forces	28
2.2	Testing the weak equivalence principle using a rotating torsion balance	30
2.3	Progress toward improved torsion fibers	31
2.4	Tests of the gravitational inverse-square law below the dark-energy length scale	32
2.5	Small force investigations for LISA	33
2.6	Progress on the torsion pendulum based axion search	34
2.7	Eöt-Wash data acquisition development	35
2.8	Test of Newton's second law for small accelerations	36
2.9	Status of the APOLLO lunar laser ranging project	37
2.10	APOLLO laser safety system	38
	Weak Interactions	39
2.11	The electron-capture branch of ^{100}Tc	39
2.12	Parity non-conserving neutron spin rotation experiment	41
2.13	Status of the ultra-cold neutron A_β experiment at Los Alamos	42
2.14	Monte Carlo calculations for experiments at LANL (UCNA) and the ILL	43

3	Nuclear Astrophysics	45
3.1	Astrophysical S-factor for the ${}^3\text{He} + {}^4\text{He}$ reaction: energy loss and beam heating in the gas cell	45
3.2	Ge efficiency measurements and calculations for the ${}^4\text{He} + {}^3\text{He}$ experiment .	47
3.3	Completion of the measurement of ${}^8\text{B}$ beta decay	49
3.4	Completion of the measurement of ${}^8\text{B}$ beta decay: Si detector response . . .	50
3.5	Measurement of the ${}^{22}\text{Na}(p,\gamma){}^{23}\text{Mg}$ reaction rate	51
4	Nuclear Structure	53
4.1	The $\mathcal{F}t$ value of the β -delayed proton decay of ${}^{32}\text{Ar}$	53
4.2	Measurement of the absolute γ branches in the decay of ${}^{32}\text{Cl}$	54
4.3	${}^{32}\text{S}(p, \gamma)$ and its importance in calibrating a ${}^{33}\text{Ar}$ beta-delayed proton spectrum	55
4.4	Mass of the lowest $T = 2$ state in ${}^{32}\text{S}$: A test of the Isobaric Multiplet Mass Equation	56
5	Relativistic Heavy Ions	57
5.1	Opacity and chiral symmetry restoration in heavy ion collisions at RHIC: the DWEF Model	57
5.2	Using lattice-gauge predictions in DWEF calculations	59
5.3	Non-Gaussian HBT Correlations	61
5.4	Studies of energy losses of fast charged particles	63
5.5	Summary of event structure research	64
5.6	Describing fragmentation functions with beta distributions	65
5.7	Identified hadron fragment distributions	67
5.8	Fragment distributions from identified partons	68
5.9	Parton energy dependence of fragmentation functions	69
5.10	Scaling violations from beta-distribution fragmentation functions	70
5.11	Correlations on transverse rapidity and fragmentation functions	71

5.12	Angular asymmetry of low- Q^2 parton fragments and non-perturbative parton scattering and fragmentation	72
5.13	Precision centrality determination in A-A collisions	73
5.14	Two-particle correlations with identified particles	74
5.15	CI and CD angular correlations in 200 GeV Au-Au collisions	75
5.16	Novel fluctuation and correlation analysis methods	76
5.17	GUI for submission and monitoring of STAR data analysis jobs	77
5.18	Web interface for viewing histograms of data analysis	78
6	Electronics, Computing, and Detector Infrastructure	79
6.1	Electronic Equipment	79
6.2	Improvements to the ORCA DAQ system	80
6.3	Single-molecule electrophoresis of RNA through a biological nanopore	81
6.4	Laboratory computer systems	82
7	Accelerator and Ion Sources	84
7.1	Ion sources, injector deck and accelerator crew training	84
7.2	Van de Graaff accelerator operations and development	85
7.3	Physical plant maintenance, repairs and possible upgrade	86
8	Outside Users	87
8.1	Studies of the low energy fission of the actinides using surrogate reactions	87
8.2	Department of Astronomy Beowulf cluster	89
8.3	Molecular dynamics of proteins and peptides	90
9	The Career Development Organization: year six.	91
10	CENPA Personnel	92
10.1	Faculty	92
10.2	CENPA External Advisory Committee	92

10.3 Postdoctoral Research Associates	92
10.4 Predoctoral Research Associates	93
10.5 Research Experience for Undergraduates participants	93
10.6 Professional staff	94
10.7 Technical staff	94
10.8 Administrative staff	94
10.9 Part Time Staff	95
11 Publications	96
11.1 Published papers:	96
11.2 Invited talks, abstracts and other conference presentations:	99
11.3 Degrees Granted, Academic Year, 2005-2006	105
